DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Brams (United States Patent No. 5,813,419).

Brams discloses a device comprising a pair of rectangular sheet joined together along the long edge thereof to form a flat tube. One of the sheets includes a plurality of sheet openings in the width direction thereof and arranged in the length direction of the tube. The device further includes a deformable member 19 which is movable relative the tube.

Claims 1, 3, 6 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Briggs (United States Patent No. 5,799,669).

Briggs discloses a device comprising a pair of rectangular sheet joined together along the long edge thereof to form a flat tube. One of the sheets includes a plurality of sheet openings 32 in the width direction thereof and arranged in the length direction of the tube. The opening may be in the form of rectangles (figs. 5 and 6).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brams.

Art Unit: 3732

Brams discloses the claimed invention except for the sheets having a Tabor stiffness of 0.4 mNm. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the sheets having a Tabor stiffness of 0.4 mNm, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Claims 2, 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Briggs.

Briggs discloses the claimed invention except for the sheet openings having a pitch of 2 to 50 mm and the sheets having a Tabor stiffness of 0.4 mNm. Regarding claim 2, it would have been obvious to one having ordinary skill in the art at the time the invention was made to form the sheet openings with a pitch of 2 to 50 mm, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. Regarding claims 4 and 5, it would have been obvious to one having ordinary skill in the art at the time the invention was made to form the sheets having a Tabor stiffness of 0.4 mNm, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Allowable Subject Matter

Claim 9 is allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
